

## AMENDMENTS TO THE CLAIMS

1-17. (Canceled)

18. (Currently Amended) A display process apparatus comprising:

an application;

a device resource which is another application;

a display screen;

a GUI player configured to display, on said display screen, a GUI content used by said application; and

a conversion section configured to, by using a conversion rule, convert from ~~[[an]]~~ a screen event related to the GUI content displayed on said display screen by said GUI player into ~~[[an]]~~ a device event interpretable for said ~~device resource-application~~, the conversion rule associating the screen event related to the GUI content with the device event interpretable for ~~said device resource-the application~~,

wherein the device resource reports, to said application, a result of interpretation executed based on the device event converted by said conversation section, and

the application processes the screen event related to said GUI player ~~by using the conversion rule~~ in accordance with the result of interpretation reported from said device resource.

19. (Previously Presented) The display process apparatus according to claim 18, wherein the display process apparatus modifies said GUI player by updating the conversion rule to another conversion rule.

20. (Previously Presented) The display process apparatus according to claim 19, wherein the display process apparatus further obtains another GUI player and another conversion rule, and updates the conversion rule to said another conversion rule that has been obtained, and modifies said GUI player to said another GUI player, by using the other conversion rule.

21. (Previously Presented) The display process apparatus according to claim 20, wherein the display process apparatus obtains the other GUI player and the other conversion rule via a network.

22. **(Currently Amended)** A display process method for displaying on a display screen, the display process method comprising:

converting, by using a conversion rule, from [[an]] a screen event related to a GUI content, which is used by an application and is displayed on the display screen by a GUI player, into [[an]] a device event interpretable for [[the]] a device resource which is another application other than the application using the GUI content-application, the GUI content being used by the application, the conversion rule associating the screen event related to the GUI content with the device event interpretable for the applicationdevice resource; and

causing the application to process the screen event related to the GUI content displayed on the display screen by the GUI player by using the conversion rule the device event converted by said conversion step.

23. **(Currently Amended)** A computer-readable program stored on a computer-readable storage medium for causing a display process apparatus to execute a display process method which causes a display screen to be displayed, the computer-readable program causing the display process apparatus to execute:

converting, by using a conversion rule, from [[an]] a screen event related to a GUI content, which is used by an application and is displayed on the display screen by a GUI player, into [[an]] a device event interpretable for a device resource which is another application other than the application using the GUI content, the GUI content being used by the application, the conversion rule associating the screen event related to the GUI content with the device event interpretable for the device resource application; and

causing the application to process the screen event related to the GUI content displayed on the display screen by the GUI player by using the device event converted by said conversion step conversion rule.
